Six ways to put a chill on rising heating bills

If high heating bills are shocking you, it's time to take steps to cut this year's heating bills.

As a Comfortmaker[®] dealer, there are a number of steps we recommend to help you cut your energy consumption and hold down your heating bills:

1. Check your ducts.

Ask us to examine your duct system. Leaky ducts let your hard-earned energy dollars slip away.

2. Block out cold air. Add caulking and weather stripping around doors and windows. If you can see daylight around a window or door, you have a serious air leak.

3. Re-evaluate your insulation.

Even if you think your home is well insulated, heat may be escaping around attic doors, water pipes, through attic vents or other openings. Make sure these areas are sealed and insulated, too.

4. Call for a system check-up.

Before that first cold morning arrives, call us to check your furnace and make sure it is operating at top efficiency.

5. Save while you snooze.

 Ask

while you are at work but warm your home before you return.

6. Consider an ultra-high-efficiency furnace.

If you are in the market for a new furnace, ask us about an ultra-high-efficiency gas furnace such as the Comfortmaker SoftSound™ line of 90%+ efficient gas furnaces. With annual fuel utilization efficiency (AFUE) ratings above

us about installing a programmable thermostat. It saves you money by lowering the temperature while you sleep and raising it just before you wake up. Programming your thermostat will also allow your system to run at a lower temperature

90%, these furnaces can wring more than 90% of the heat out of every cubic foot of natural gas.

an insulated blower compartment to reduce operating noise. Attractive solid doors provide a sealed combustion compartment for even quieter operation.

➤ **Dependable quality, long-life design:**

SoftSound furnaces are tougher and more dependable than ever before. Comfortmaker 90% furnaces feature patented weld-free RPJ® III heat exchangers for maximum performance and durability. To ensure quality, every primary heat exchanger must pass a leak test before it goes into the furnace, and every furnace undergoes up to 45 different tests before final packaging.

Comfortmaker air conditioners and indoor coils are

designed to ideally complement your furnace. Also ask us about air cleaners, set-back thermostats, and humidifiers—additions that can make a big difference to the quality of the air you breathe at home.
