How to Make Your Furnace Pay for Itself

With proper care, a new ultra-high-efficiency gas furnace can pay for itself in energy cost savings when it replaces an older, less efficient furnace.

If your furnace is more than 10 years old, it may be sending as much as 40% of the heat up your chimney. New ultra-high-efficiency furnaces, such as the Comfortmaker[®]

SoftSound™ 90 series, can wring more than 90% of the heat out of each cubic foot of natural gas.

That is like switching from a car that gets 20 miles per gallon (MPG) of gas to one that gets 30 MPG. As with your car, your furnace's actual energy savings will depend on how you use it.

The makers of Comfortmaker furnaces recommend these ideas to help you save energy:

Step up to a variable-speed furnace—Top-of-the-line gas furnaces, such as the Comfortmaker SoftSound VS 90, use a high-efficiency variable-speed blower motor that can cut your electricity bill as well as your natural gas bill. Since the furnace is generally used as a blower for the central air conditioner,

a month. Keep the registers clear and open. Vacuum dirt off the return air grille.

Call for an annual check-up—Contract with us to check and service your furnace system once a year. This service will help avoid costly major repairs and keep your system operating at peak efficiency. It may also be a requirement of your furnace warranty.

a variable-speed furnace can cut your electricity bill all year long.

Keep it clean—Free and open airflow is essential to efficient furnace operation. Follow the manufacturer's instructions for changing or cleaning filters once

Ask for a full system inspection—Ask us to examine your entire heating system, including ductwork, registers, insulation and other elements which contribute to your heating system's overall energy efficiency.

Caring for your home comfort needs!

We provide professional design, installation and service of quality heating and cooling products, backed by outstanding warranties. As a Comfortmaker dealer, we are committed to delivering home comfort solutions to you with energy efficient products for maximum energy savings and reliable operation for peace of mind year-after-year. We take pride in taking care of your home comfort needs!

Does your furnace really need a preseason check-up?

When you own a top-of-the-line furnace such as the Comfortmaker® SoftSound™ VS 90 model, do you really need an annual service check?

The answer is a resounding YES! Here's why:

1. Cut your gas bill. Our qualified service technician can adjust your furnace for maximum energy efficiency operation.

2. Extend your furnace's life. Our service technician can perform preventive maintenance checks to help you avoid expensive repairs in the future. Regular preventive maintenance can add years to a furnace's life.

3. Your warranty may require it. Many manufacturers now cover their furnaces with warranties up to five years on parts and even longer on heat exchangers. Just as most car warranties require routine service, some furnace warranties now require annual preventive maintenance to help extend the life of the product.

Call us today to schedule your service check!
